Digitalis Walberton's® Goldcrest

Breeder: David Tristram
UPOV name: Digitalis WALDIGONE
Protection status: EU PVR application number 20092169
"Walberton's" is a registered EU Trademark number E733196
US Plant Patent applied for
The breeder asserts ownership of all rights in this plant.

Characteristics:

Goldcrest represents a step-change in the quality of Digitalis varieties on the market. With a handsome and neat habit, sturdy stems bearing plenty of flower, distinctive colour and excellent growth qualities, Goldcrest is sure to be a popular success. A hybrid between Digitalis grandiflora and D. obscura, Goldcrest is sterile, perennial and exhibits continuous flowering from July to October, with yellow-peach flowers with red-brown markings on branching stems. The foliage is neat, dark green and evergreen. An excellent and easy-to-grow perennial with impact, for the herbaceous border.

Hardiness: Expected to be hardy to USDA zone 4 (-20 Celsius)
Bloom: Yellow-peach tubular flowers with red-brown markings on branching stems from July to October.
Foliage: Smooth, dark-green evergreen leaves.
Habit: Tidy and compact. 45cm (18 inches) high.
Propagation: Tissue culture
Note: a licence is required for propagation.
Culture: Similar to other Digitalis. Part shade or sun, rich soil preferred.

Additional information:

This is an excellent addition to the genus. It is best finished in a 1.5 litre container. A long season of flower will ensure a good shelf life in the garden centre.

Executive Director: Graham Spencer DipM MCIM

Digitalis Goldcrest

Licence required for propagation. Contact Plants For Europe Limited for details.

Note: the inclusion of any plant in PFE's portfolio listing is not an offer for sale of that plant, and is merely intended to create interest in licences for propagation. In every case, the breeder's rights are preserved, and the breeder retains all rights in the intellectual property in that plant.
