### Pulmonaria Pink Haze

Breeder: John and Rosemary Solari  
Protection status: EU: PVR granted EU16875  
US: Plant Patent #14,307

#### Characteristics:

Pulmonaria Pink Haze has larger, more open flowers, than other varieties – in fact, the flowers are bigger than any other Pulmonaria that we have seen. The flowers are clear pink with slightly ruffled edges, and are held upright over the leaves. The foliage is mid-green in colour, with prominent large grey-green spotting.

Pink Haze makes a great front of the border, specimen, or ground cover plant.

Hardiness: similar to other Pulmonaria saccharata types, i.e. hardy to USDA zone 3 (minimum temperature -35 Celsius)

Bloom: very large clear pink flowers held clear of the leaves.

Foliage: broad mid-green with prominent grey-green spotting.

Habit: dense ground cover.

Propagation: tissue culture, division.  
**Note: a licence is required for propagation.**

Culture: sun or shade, any soil that is not very dry.

#### Additional information:

This variety is causing quite a stir amongst Pulmonaria aficionados due the extra large and showy flowers. We expect it to be very popular.

Pink Haze is being bulked up in tissue culture at the moment. Established plants are available for trial purposes (under secure trial agreement issued by Plants For Europe Limited).

Trials held in the UK have shown that it makes an excellent plant in 1.5 or 2 litre pots for impulse sales in early spring.
