### Zantedeschia aethiopica Snow White

Breeder: Flip Schram  
Protection status: The breeder's proprietary rights are asserted worldwide.  
EU: PVR granted EU26626

#### Characteristics:

Snow White is an excellent new dwarf selection from the widely-grown variety Crowborough. It is considerably shorter than the parent variety but still produces plenty of the familiar large white spathes over a long period. It is expected that Snow White will also share the parent's hardiness quality, perhaps hardy to USDA zone 8, making it suitable for garden use throughout most of the UK.

Hardiness: hardy to USDA zone 8 (minus 10 Celsius)

Bloom: large pure white spathes from March to May, often with a second season in July and August. Each large flower up to 23cm x 20cm

Foliage: broad mid-green foliage which has architectural value.

Habit: upright habit. Flower stems reach approximately 45cm.

Propagation: division or tissue culture.  
**Note: a licence is required for propagation.**

Culture: full sun preferred. Rich, moisture-retentive soil – mulch in winter for best results. Also suitable for planting in shallow water.

#### Additional information:

Zantedeschia Snow White has already been successfully launched in the Republic of Ireland. It makes an excellent plant for garden centre sales in 2 litre pots. A significant advantage over the parent variety is that many more plants can be packed on each Danish trolley.

Executive Director: Graham Spencer DipM MCIM  
Registered at Cardiff, number 4664540  
Registered office: 74-76 Aldwick Road, Bognor Regis, West Sussex, England PO21 2PE  
All correspondence should be sent to the address at the head of this page.

Left: test plants of Snow White compared to the parent variety (Crowborough) at the breeder's nursery in Ireland.

Below: an individual flower, approximately 23cm x 20cm.

Licence required for propagation.  
Contact Plants For Europe Limited  
for details.

Note: the inclusion of any plant in  
PFE's portfolio listing is not an offer  
for sale of that plant, and is merely  
intended to create interest in  
licences for propagation. In every  
case, the breeder's rights are  
preserved, and the breeder retains  
all rights in the intellectual property  
in that plant.
